

CHICAGO

Bethany W. & Cynthia M.

What Living In Chicago Is Like

Chicago has a nice environment, great places to visit, and eat at. There are many events to go to that happen in the summer for our family and friends to attend and enjoy. The experience is great.

Is Chicago Safe?

Is any city truly ever safe? We all our guilty to turning a blind eye every once in a while to something bad. You never know who's watching you

The World is a Mystery

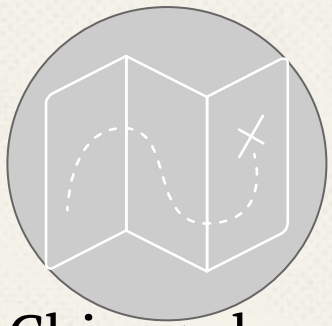

DANGERS

Places can look deceiving. You may just see two regular street but these could be the same streets that you could be gunned down or even kidnapped.

How Can WE Change Our City

- Having people as a community help around the city
- Having people join programs that can change the environment
- Have people give us their thoughts on what they think about our city
- Students could do surveys about our city

NATURE

Chicago has a couple nature preserves. It's a great place to go and spend time with others to enjoy. Nature is something that we don't usually get to have since we live in such a different environment near the city. But when we are viewing a place where you get to admire it you appreciate it more for being there.

There's Always A Bright Side

There will always be a good side to things like our positive environments. We have some great places where we can go sit down and relax.

No more Red

Red is the color of blood, and because of this it has historically been associated with sacrifice, danger and courage. Our city always sees the color red but maybe we can change it to something different.

The Metro

We are lucky to even have places like a metro station but let's not let it be the place where you meet your end.

WELL

IN THIS WHOLE ENTIRE WORLD WE JUST HAVE TO WORRY ABOUT OUR CITY

Thank You!
